December 13, 2023

Fold a sheet of white paper and one of red paper. Cut according to the diagrams below, one for red and one for white. Braid them so the two dots meet. The square with the dot should have red paper outermost.

With the diagrams above, the back side of the heart is mirrored. This can be fixed by using the diagram on the following page for both colours. You should cut along the lines (except the horizontal line, which indicates where to fold) with a sharp knife. It is an advantage to scale up the diagram (using a photocopier) before use, as the heart will be rather small otherwise.
